                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents human bcl-y protein (Hbcl-y). The constitution also describes rat bcl-y protein (Rbcl-y). Rbcl-y and Hbcl-cy are homologues of the bcl-2 protein thought to be involved in compared cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y compared cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y compared cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, compared to the cell death inhibitors, they may be consisted with a disruption of compared to the cell death inhibitors, they may be consisted with a disruption of conditions where cells and muscular degenerative diseases could death, aging, spinal cord injuries and amystrophic lateral sclerosis conditions where cells under go premature cell death as a result of triggers which may or may not be apparent. They may also be used in this caption, and the cell incompared cell compared cell incompared cell in contrast, if they act as cell death stimulators, Rbcl-y and the span such as cancer (especially kaposi's sarcoma and lung cancer) and auto/hyperimmune diseases. They may also be used to cause cell death can and hence control, parasites

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a novel human protein, bcl-w, encoded by the bcl -2 gene family and extracted from an adult brain library. This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production or screening of potential modulators

                                                                                 An animal model exhibiting reduced levels of a Bcl-w protein and/or protein associated with Bcl-w.
```

Disclosure; Page 37; 52pp; English

The present sequence is described of a derivative of human Bcl-w (see also AAY0533), a pro-survival member of the Bcl-2 family that is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene (see AAX25132-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, can induce intertility enhancing or otherwise facilitating spermatogenesis inducing, ls, or which

The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility or reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene (see MAX25132-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological concluding genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in animals, or which can induce infertility

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a mammalian bcy-1 protein. The grecification describes rat bcl-y protein (Rbcl-y) and human bcl-y components (Hbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein (Lbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein chought to be involved in programmed cell death (appptosis and necrosis). Rbcl-y and Hbcl-y proteins may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death components in the strokes, they may be used in therapies to treat subjects suffering from: strokes, head trauma, Alzheimer's Disease, neural and muscular components, head trauma, Alzheimer's Disease, neural and muscular components, result induced cell death, aging, spinal cord injuries and confident as a result of triggers which may or may not be apparent. They can also be used in this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, Rbcl-y and Hbcl-y may be used to treat conditions associated with prolonged cell life span such as cancer (especially kaposi's sarcoma and lung cancer) and auto/hyperimmune diseases. They may also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches 191;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The bcl-2 family have both apoptotic activity and the apoptosis blocking activity. bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell

CC specification also describes human bcl-y protein (Hbcl-y). Rbcl-y and cc Hbcl-y are homologues of the bcl-2 protein thought to be involved in corrections may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death inhibitors, they may be used to treat subjects suffering from: strokes, head trauma, correctably multiple sclerosis), myocardial infarction, vitally induced cell death, aging, spinal cord injuries and amyotrophic lateral sclerosis cell death, aging, spinal cord injuries and amyotrophic lateral sclerosis correctably multiple sclerosis or premature cell death as a result of criggers which may or may not be apparent. They may also be used in this cord injuries and injuries for an extended cord in contrast, if they act as cell death as a result of period. In contrast, if they act as cell death stimulators, Rbcl-y and Ebcl-y may be used to treat conditions associated with prolonged cell conditions conditions associated with prolonged cell conditions conditions conditions conditions conditions conditions

Rbcl-y and Hbcl-y are homologues of the bcl-2 protein CC thought to be involved in programmed cell death (apoptosis and necrosis). CC Rbcl-y and Hbcl-y proteins may be used to treat conditions associated CC with a disruption of the cell death pathway. If they act as cell death CC inhibitors, they may be used in therapies to treat subjects suffering CC from: strokes, head trauma, Alzheimer's Disease, neural and muscular CC degenerative diseases (especially multiple sclerosis) myocardial CC infarction, vitally induced cell death, aging, spinal cord injuries and CC amyotrophic lateral sclerosis- conditions where cells under go premature CC eall death as a result of triggers which may or may not be apparent. They CC may also be used in this way to develop cell lines which remain viable in CC culture for an extended period. In contrast, if they act as cell death CC with prolonged cell life span such as cancer (especially kaposi's sarcoma CC and lung cancer) and auto/hyperimmune diseases. They may also be used to couse cell death in, and hence control, parasites

                                                                                                                                                            5
                                                                                                                                                                                               В
                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                         The present sequence is described of a derivative of mouse Bcl-w (see Cl also AAY05531), a pro-survival member of the Bcl-2 family that is widely expressed and which is essential for spermatogenesis. The derivative lacks the 24 N-terminal amino acids of Bcl-w. The invention relates clearly to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one callele of the human or murine bol-w gene (see AAX25132-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, capitals of a characteristics.

This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production or screening of potential modulators

                                                                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of the human Bcl-Rambo apoptotic transcription factor, particularly the BHNo domain. The sequences are useful in the treatment of diseases caused by incorrectly regulated intracellular signal transduction, including cancers, neurodegenerative diseases (e.g. Alzheimer's or Parkinson's diseases), muscular dystrophy, viral infections (including human immunodeficiency virus), autoimmune disease, septic shock, graft versus host disease and acute hepatitis. The present sequence is a procein described in the exemplification of the invention

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8G
